Jordan Mechner is extracting source code to Prince of Perisa (Apple II version) and posting it online. Perhaps time for a port? :)

https://github.com/jmechner/Prince-of-Persia-Apple-II

(Someone ported it to C=64 a while back, but that was from a binary dump of the Apple II game, not from the assembly source code, that Mechner is posting today :))

Testing: Going back to OE to post to newsgroups as now google groups won't load because of my slow connection.<sigh>

I certainly applaud the gift and any effort that goes into using it as a resource.

A consistent if not ubiquitous nag I have is standards. I am making a few efforts in that direction, mostly small and feeble. It would have been better if Apple, Atari, C64, et cetera all had a uniform expanded graphics standard available. VGA has 'sorta won on the DOS/Windows/Linux, Android, ... platforms. Ports and new software would be much easier if things like the graphics only had to be done once and could be directly used on all platforms.

Heck, there are dozens of SBC from ARM to Zilog hacks. If there was one platform for graphics and interface to it that everyone agreed on people could get their one off Z8000 computers running the latest greatest youtube video if nothing else.

Rick

Every manufacturer thought their computer standard would win the
format war back then - so no co-operation on common standards.

5041. Jordan mechner's blog post on finding and posting the Prince of Persia source

Newsgroup: comp.sys.atari.8bit
Date: 2012-04-18 19:45:01 UTC
From: bill@newbreedsoftware.com
Message-ID: <4f8f19bd$0$16205$742ec2ed@news.sonic.net>
Source record: 280

Prince of Persia Source Code -- Posted!
http://jordanmechner.com/blog/2012/04/source/

"Let me begin to count the ways I've been lucky with this: The box
was found. The disks were intact. Prince of Persia and I happened to
have a high enough public profile that people of Jason and Tony's
caliber (and dozens of others who contributed their expertise via IRC,
skype and twitter from around the world) cared.

"In the bigger picture, our timing was lucky. The 1980s and the
Apple II are long enough ago to be of historical interest, yet recent
enough that the people who put the data on the disks are still with
us, and young enough to kind of remember how we did it. Roland
Gustafsson, author of the special 18-sector RWTS routines that had
made our disks super-efficient in 1988 (and unreadable to anyone but
us), was able to get on IRC in 2012 and explain what he'd done to
Discferret kids who weren't born then.

"For all these lucky reasons, our archaeological expedition was
crowned with success.

"From a preservationist point of view, the POP source code slipped
through a window that is rapidly closing. Anyone who turns up a 1980s
disk archive 20 or 30 years from now may be out of luck. Even if
it's something valuable that the world really cares about and is
willing to invest time and money into extracting, it will probably be
too late."

Stares at my own collection of 5.25" floppies

Also, thanks to folks like Kevin Savetz (AtariArchives.org &
Classic Computer Magazine Archive) and Peter Brantley,
et al (Internet Archive) who have been trying to archive great
stuff all along! :)

5046. Worth more dead then alive

Newsgroup: comp.sys.atari.8bit
Date: 2012-04-29 16:55:01 UTC
From: Rick <"ricortes at yahoo dot com">
Message-ID: <j_idnbg5o67p7wDSnZ2dnUVZ_q2dnZ2d@earthlink.com>
Source record: 285

Too many projects but still doing "the bucket list" thing. I did an 1802 system on a breadboard. Quest Super Elf was my first computer. The moving finger writes; and, having writ, moves on. I down right love the 1802 but having seen it run again I think I am happy and can put it away.

Still have a lot of other junk like a CP/M box, DEC PDT/150, Jupiter Ace, et cetera that I want to have one last look at. All low priorities though.

Which brings me on topic. On a lark I decided to build a 6502 type minimalist system. I have some oddball parts laying around, couple of 1050 boards I can get a RIOT, 6507, ROM. I have a 65816 I bought off eBay many moons ago. Not sure which processor I want to use but since a minimal 6502 system needs some ROM and they all have the same instruction set, it really doesn't matter.

Did a paper design with just a ROM at the top of memory and the only system RAM from the RIOT with it mapped/mirrored something like a VCS2600. I checked JAMECO and eBay just in case I decide to return to service the 1050 or VCS I was going to use for parts running w/o having to cannibalize my home brew. Darn RIOT chips are going or $8-$14 plus shipping! I priced out some of the stuff and to build a simple homebrew that you could actually use would cost a small fortune. 6551 serial chips are just about as high. None of this is bad so much as changed.

If you build an old school *functional* computer from scratch you would do well to keep cost under $100. For that same $100 you could get an Android tablet. You can get a CPLD for a couple of bucks that you could put all the same functions on including a soft processor or a SOC with them already there.

Just bought a Atmega16 this week
http://www.ebay.com/itm/270745443529?ssPageName=STRK:MEWAX:IT&_trksid=p3984.m1423.l2649#ht_3854wt_932
as an example for less then $17. Heck, serial, SPI, flash, RAM, ADC, PWM, built in.

Rick

5053. 5200 emulator

Newsgroup: comp.sys.atari.8bit
Date: 2012-05-01 22:58:24 UTC
From: Rick <"ricortes at yahoo dot com">
Message-ID: <N9-dncpfHrIA9z3SnZ2dnUVZ_gKdnZ2d@earthlink.com>
Source record: 292

I'll give a plug for Notepad++, seems like a pretty good programming editor.

I was fooling around with my usual TASM testing out making 5200 ROMs and modified a bit of Dan's code so it would work with TASM and added the RTC & inverse video stuff.

Compile with the command line
TASM 5200RTC.SRC -65 -b -fFF
The 5200RTC.SRC is the source file name you use
-65 tells TASM to use the 6502 instruction set
-b tells TASM you want a binary or .OBJ file as opposed to some other output
-fFF tells TASM to fill the unused portions of the ROM with $FF. This isn't really important but when you erase an EPROM it is all $FF's. If for some reason the EPROM fails to program in an unused section, if the programmer reads an $FF it will think it is right. You should be able to just do sections and add stuff later depending on your EPROM.

I fumbled with this right and left, really rusty. Kept forgetting to look for decimal vs. HEX for calcs, made every mistake posible with the assembler -f FF is not the same as -fFF.<sigh>

BUT this really wasn't hugely bad. Talk about a good programming envirionment. I had a DOS window open to the TASM directory, the source file open in Notepad++, Atari800Win Plus 4.0, and Memo Pad in another.

I would edit the source code a bit and save, go to the DOS command line and hit "F3"<return> which would assemble the file, jump to Atari800 and go to the 'insert cart' menu and just let it load the same file. Whenever anything got to crazy I just loaded it into Memo Pad to inspect the binary. I probably should use a disassembler or monitor for the last step but heck, I never went that far south. Finished source to test didn't take 10 seconds and both TASM and NotePad++ were in sync on line numbers. At least for the emulator a BASIC would make sense. You have something like 32k of cartridge space so you could add most of the features that were left out of the OS. Lack of storage doesn't mean much since you can save multiple copies of the emulator state with your resident program installed.

Rick

Sheesh! There goes another $35 of my hard earned money in the near future and a journey back into Linux.

I heard someone estimate the new product cycle in the Far East is 4 years. It will overflow to stuff done in the Western World. If it's true then the 'good old days' like we had where:

1) Parent buys computer
2) Computer is manufactured and supported for decades
3) Child grows up in household and continues tradition for 2nd generation

30+ years of stuff like Atari and Spectrum computers.

There's real competition and innovation going on. I don't think it was that long ago I was talking about my PMP being programmable and running at ~140 MHz. Just bought my 4th Windows mobile phone off fleabay for less then $20. I'm giving them out to relatives like stocking stuffers at xmas. I got fed up with br0k3ass3d friends and relatives complaining about [lack of digital camera, can't post to craigslist, no email, ...] Something like 400 MHz ARM processor with built in Wifi let's them sit at McDonalds and surf the internet.

Android looks strong too. Active community of people hacking and supporting the OS on everything from phones to tablets. $70 tablet and $10 USB keyboard take care of most of the stuff people need. Tablets even come with built in camera albeit a crappy one.

Right now it looks like some flavor of Android and ARM processor are going to win. Of course 30 years ago Digital Research, Atari, and Word Perfect looked unstoppable.

Rick

Source record: 295

I came up with clues (keyboard wear-and-tear, specific upgrades done
to it) to help Bob Woolley track down my Atari 1200XL, which got
jumbled into his pile of systems at some point over the decades. :)
Here in my home office, limping along with it's slightly unhappy
keyboard, and chroma-less S-video upgrade, sits my first computer (not
counting the Timex Sinclair 1000 I got as a hand-me-down, and used for
about a year before I got my 1200XL in 1983, it must have been).

I'm very happy to have it back. :) Overwhelming nostalgia and love,
for one thing -- I used it exclusively for 9 years (aside from
Apple IIs and such at school, and occasional C=64 gaming with my
brother), and programmed countless unfinished (and some finished!)
games in BASIC and TubroBASIC XL, and experimented with Action!.
I'm guessing I wrote Gem Drop on the beast, as well, back in 1997/1998.

Also, the 1200XL that Bob had given me in the meantime, about 2.5yr ago,
had some funky 512KB upgrade and a tweaked(?) OS, and it was generally
not acting particular compatible with some software.

I've been going through my collection of floppy disks, taking some
crappy cameraphone photos of some of my BASIC stuff and uploading
them to Facebook, as well as sticking PostIt-notes to the disks
that have one or more 'interesting' things on it that might be
worth putting online for people to laugh^H^H^H^H^Hlook at.

It's amazing how many of my games I just stopped coding, and they
languish at the end with this curse, bestowed upon them by their god,
me, the programmer:

```
999 GOTO 999
```

... of course, I was looking at all my old BASIC stuff using TBXL,
and honestly so much of it was probably so dog slow in regular BASIC
(which I used until 1992) that I deemed my experiments unsalvageable.
Or I was just a kid and got bored and decided to do something else.

I didn't have Atari magazines growing up; I had some Compute!s
(I think I got them long after they were published) and 2 or 3 Atari
BASIC books. (Compute!'s First Book of Atari Games, IIRC, is well-worn.)
I had to figure out how to make character sets using binary math by
stumbling upon some bitmapped graphics printing routines in my XMM801
printer manual... prior to that, the DATA numbers and POKE 756 were all
black magic. :)

I also had almost NOTHING in the way of commercial games (Boulderdash,
Q*Bert, D-Bug, Delta Drawing, Pinball Construction Set, Chessmaster
2000; eventually AtariWriter II)... for years! Nowadays, I've

inherited a small collection of cartridges from other people's collections, and of course almost every game can be had online, free and illegally. :^P

But looking at my collection of self-written game attempts, that fact is very obvious. I tried writing EVERYthing for myself. Baseball, golf, Othello, clones of Nintendo (NES) games, clones of Atari 2600 games, various Tetrises, a graphing calculator for math class, Scrabble, font editors, paint programs, GUIs, fancy DOS menus, word processors, etc.! That's just the stuff I've found in 2 small boxes of floppies. (Maybe 30 disks total.) I have GOBS of disks. :)

I look forward to finding more gems, more stuff to crack up at, and sharing it with some of you all!

Here's what I've posted so far, crappy-photo-wise:

https://www.facebook.com/media/set/?set=a.10150680816790778.386037.518895777&type=3&l=a14e2a39ce
(You don't need to be on Facebook to view that.)

Enjoy ;)

I still have my first Atari system, an 800 w/ 48K RAM, 2 floppy drives, printer, and software. Monitor was a 10" Panasonic TV. Still have that too, but got beat up in shipping by persons unknown. But I found a working spare at a thrift store and bought it.

Getting it set up and running is another low priority computer project.

There's just so many ways to separate me from my money!<grin>
http://www.alibaba.com/product-gs/545516201/Worldwide_smallest_smart_android_tv_box.html

The specs on that one match my desktop except for hard drive. My laptop has
it beat.

It's a confusing time and I am easily confused. I've heard VGA is at the end
of its product life. I've heard real modems are selling for ~$300 because
they are still used by POS for credit cards and electric transfers: No one
trusts the internet or wireless.

I don't think you can buy anything but a SATA hard drive and IDE controllers
are going the way of the dodo. Remember when there was something called a
Sound Blaster?

This type of info used to be good news for someone like me, living off the sharp edge of technology, but now people are so hard up they are stealing stuff just for recycling. I may pick up a few more LCD VGA monitors just for fool'in.

I've been really dissatisfied with stock Atari video for a while. I've had an insight that may be cheap and work. There's a couple of techniques people have used for bank switching carts and some devices like the Covox. One is to latch the address lines and the other is to set up a single latch like a 74LS374 in the memory map. There's shift registers like the 74LS165 that were used in early video for things like the Timex Sinclair and even Bob Woolley's 80 column mod. What I was thinking was the same signals that latch cart banking could be used to latch data into a 74LS165 except instead of doing it under processor control or via a separate video chip like a 6845 I should be able to get the signals from ANTIC. Done this way everything will be sync'd with the existing display and overlap w/o flicker. Antic will just go through its reading 40 bytes per scan line which will load the shift register with it's own RAM, Simple form would just be a the shift register and an 8k RAM with enough glue logic to make it work. Shouldn't cost more the $5 in parts.

Of course you could do something fancy, like use a 16 bit wide RAM and two 8 bit shift registers with a fast dot clock to get 640x200 but that would add so much complexity I doubt if 1 in 1000 people could build it. Heck, I couldn't build it. I was happy with the ST 320X200 in 16 colors for games. I think I could be happy with and 8bit that throws 16k<8k system + 8k RAM> of display up.

Rick

5060. DarkForce BBS April 2012 prize giveaway!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

5062. KARATEKA Super Carts 7800 POKEY

Newsgroup: comp.sys.atari.8bit
Date: 2012-05-05 16:46:00 UTC
From: Rick <"ricortes at yahoo dot com">
Message-ID: <48KdnQYSHZfWxDjSnZ2dnUVZ_radnZ2d@earthlink.com>
Source record: 301

So for at least one of my homebrews I wanted to get a spare POKEY or two: Best combination sound chip, keyboard interface, serial interface, ~ADC, chip ever made. Of course it is the only combination sound chip, keyboard interface, serial interface, ~ADC, chip ever made

There's some old post floating around that said the 7800 carts that were labeled "Super Game Cartridge" have the POKEY chip in them so I fleabayed two KARATEKA carts on the cheap. Smashed one of the carts apart and no POKEY to be found. I guess the Super part just means it has the ability to hold 48k of ROM as that is tagged on the circuit board.

I think I may have a 7800 floating around => not a total waste if I can find it. If someone needs a slightly smashed and superglued back together KARATEKA cart for free let me know as I have a spare. There are some solder splashes on it, looks like one of the previous owners may have pulled the ROMs to copy or something, but nothing serious.

Ballblazer 7800 may have a POKEY in it but I may give up the ghost on buying 7800 carts. POKEY chips are available from both B&C and BEST, I just balk at paying $10 plus another $6-$10 for shipping. It's not a deal breaker since I still have a bunch of 8bits I can 'borrow' a POKEY out of.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups
every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

5073. Colleen on the Android

Newsgroup: comp.sys.atari.8bit
Date: 2012-05-29 23:14:36 UTC
From: Rick <"ricortes at yahoo dot com">
Message-ID: <dYqdnRjfffIaxVjSnZ2dnUVZ_oGdnZ2d@earthlink.com>
Source record: 312

"And as a tablet/e-reader combo that tries to compete with Apple's iPad, the Novel is slow and inelegant, and lacks the full versatility that a true tablet user expects."

Reading that I just had to run out and buy one of these beauties. Not that I am keeping score but it's my second Android tablet. It was on sale at Big Lots for $40 so I figured what the hey. Believe it or not they had an Android netbook, no touch screen but a keyboard with mouse pad, on sale for $30 but I didn't get there in time for that one.

This was an inexpensive Pandigital Novel, the black reduced feature model that even people with the white model turn their nose up at.

It does everything you'd expect it to do considering the reviews. Works good at Wifi hotspots, nice picture viewer, couple of lame games that my six year old grandaughter likes to play, e-reader is functional.

Problem is no access to the real Android Market so I'm reduced to putting APKs on an SD card with my WinXP machine and plugging it into the tablet for the install which brings me current.

I've been running Droid800 on my two tablets and it's a pretty sucky experience. They are both trailing edge 800 MHz ARM based boxes. Does Colleen run any faster then Droid800? Are they all still open source? I haven't played with frame skipping yet but not experiencing much love. I expect just a little bit more performance from an 800 MHz, 32 bit, processor emulating a 40 year old 8 bit. I'm sure much of the half broken stuff like loading carts and binaries can be fixed but slow is too slow. I'm already shopping for a faster tablet!

Rick

I've been pretty happy with my Acer Iconia. You can get them refurbished
for about $230 on ebay. They have a dual core processor and a full size
USB port. I actually bought it for my wife for Christmas, but she lasted
about 3 months before deciding I'd get more use out of it.

I have been curious about how you're supposed to control the Atari
emulators I've tried to use, however...

Have you been able to order your Pi yet? I finally made it up to the top
of the waiting list last week, but apparently even now that it's ordered
it's still a few weeks out on shipping.

I haven't ordered it yet. I've heard that because it was intended for
schools in England, they will get priority over forgein sales. It isn't a
huge priority for me because of other projects competing for my time at that
momment. There are a few apps I would like to see on it, like running
AtariSIO for linux, but I have alternatives for now.

Colleen/Droid use shaded overlays on the screen to simulate joysticks. You just tap anywhere in the upper right hand side of the screen to bring up the menu system and console keys. It is a bit awkward switching back and forth between the touch screen and onscreen typewriter. My latest tablet does not have a provision for a USB keyboard and that is somethng I really miss. I had problems loading ROMs/Cartridges but .ATRs seemed to work fine.

The first Atari emulators, even those written in C, could run on a 286 and would outrun a real Atari on a 386. I've got to believe the ARMs have as much 'go fast' in them as a 286. I tried wading through the code and it has become a tower of babble. I can't remember how I originally got involved but David Firth emailed me with problems he was having with the original Atari800 emulating the CPU. He sent me a copy of his code, I compiled it and sent it through a disassembler to see what it was doing and made a few suggestions. He sent me back a different version written by his brother who was writing an Oric emulator. The thing is, David's code was completely obvious and understandable to anyone versed in C. My response was obvious and straight forward as to why there was a problem, the compiler, and how to work around it. His brother's code took yet a different way of working around the compiler problems and was both obvious and understandable. Now I look at this mess and it stuns me. I don't think I have it in me to learn enough ARM assembly language to go through that again.

Heck, too old and grumpy. Ordered parts from Jamco for another Atari project I started. I ordered a thought I ordered 27C080 and they sent me a 27C1001. 99% sure it was my fault but these senior moments are killing me!<grin>

I'm planning to use it to teach my kids about computers the way I
learned about them as a kid, 30 years ago. I almost wish it didn't come
pre-assembled.

Me too except grandkids<grin>. I think the Pi is targeted towards hackers more so then as an educational computer for the time being.

Me too except grandkids<grin>. I think the Pi is targeted towards hackers more so then as an educational computer for now. It could end up being the Swiss Army knife of computers. I certainly hope it evolves into the use the designers envision. We have our own specific apps like AtariSIO that could be compiled on the platform and be a low cost alternative to things like SIO2SD.

When I was doing volenteer teaching work in Mt. View California, one of the most popular programs was really low level robotics. The system they were using was turn key: Preassembled kits and programming interface to computer with easy to use programming language. About 1 in 10 students seemed to have a genetic predisposition for things mechanical and it allowed them to let out their inner geek. It would be nice if we could find another generation that is more into hacking then watching tv and playing WoW.

Then there's other project in sore need of an update. One of my favorites is http://www.megasquirt.info/ using an 8 MHz 68xxx derivative in that one and it costs a small fortune.

Archive-name: atari-8-bit/welcome
Posting-Frequency: 20 days
Last-modified: May 2, 2012

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups
every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

The Digital Game Museum is hosting an Atari Party -- all of my systems will be there -- at Cogswell Polytechnical College in Sunnyvale on Sunday, July 29th. It's free, and open to the public! Come enjoy a variety of Atari (and other systems) games, to celebrate Atari's 40th birthday, and the 100th birthday of Sunnyvale (long-time home of Atari).

More info at:

http://digitalgamemuseum.org/blog/were-having-atari-party

My own Atari Parties, which I've run in Davis, California -- as well as some 'Retro Gaming for Teens' events that I've thrown for some local public libraries -- can be found here:

Posting-Frequency: 20 days
Last-modified: May 2, 2012

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

I have two Android devices being a Archos 32 and a Nextbook 8".

The Archos is great, the Nextbook barely passes as a usable device. :P

I think when it comes to Android devices the saving throw is to get a
device that is marketed and supported by the Android market. If it is
not a system that does not run that off the bat, you should probably
steer clear of it.

However, that said, the Nextbook is good for reading pdf files in a
larger format. Now if I can just figure out why Angry Birds is trying
to access the internet all the time though it is already loaded, why my
screensaver keeps wanting to activate (that was embarrassing when giving
a presentation in front of a lot of people), and ... not sure but I
think the movies do ok.

But Android Market and having that support I think is a good indicator.

Wow Bill, that splash of pictures was amazing. Just reminded me of a time when I saw the online world, and culture of the world through the eyes and color of my Atari computer.

I mean looking at the Blake 7 pictures just reminded me of all the times I would download gif files to view on my lantern viewer, or when I would download 15 second LONG files just to hear Madonna or Van Halen sing a quick clip.

And I loved the more recent material with Beavis and Butthead and the ones that mention Facebook. So what was the Facebook ANSI BBS all about?

As for original equipment, I still have my Atari 400 (modified with 1200xl keyboard and upgraded to 48K), my Percom drives (not working at the moment, but I have other drives) and my 1025 printer, 1030 modem, and 850 interface.

Of course though my Atari 400 still works my current setup is a beige 800, 810 drive, and 850 interface. Trying to keep it all beige.

Currently looking for the double density beige drives, and also trying to get a beige printer of some sort up and running. Have a 825 printer, just need to get that dinosaur running. :P

Heard about this when it happened. All I have to say is, love him or
hate him (and I think you should love him just for the reason of what I
am about to say) you have to admit that without him Atari would have
been a name that would have stopped in the 80's. And for those of us
who like the later stuff of the ST line, Lynx and Jaguar, he at least
made those happen.

So a man in my book that will be greatly missed.

Angry Birds is full of ads (even the paid version; they're just not quite as obvious). A popular workaround is to disable the Internet connection when playing it.

I love my Acer tablet. :)

And my Raspberry Pi finally came this week. It's not an Android device, though. It actually reminds me of the Sinclair ZX81 that my dad put together from a kit, and was the first computer I learned to use. I'm excited to finally get some time to play with it this weekend.

And now the bad news: I just checked a supplier while holding a credit card in my hot little hand and there is 141 day lead time for it. If I ordered it today I may get it in time for xmas. It was enough to make me hold off for a while longer.

I guess it is good on a few levels, lots of people buying them + lots of people hacking them.

I got on the waiting list (to order) in March, was notified I could
order in May, and it finally arrived last week. Are you at least on the
waiting list?

Not on wait list, I think it is one of those pay for it now and they hold your money for you. If I have it correctly, they have to order them from Farnell<sp?> in England and wait for the shipment.

I'm kind of sensitive when it comes to being disappointed. I recently got burned on the 6502.org site trying to buy a 65816 system. I think the guy trying to sell me his died so he had a good excuse. I laughed, I cried, I kissed my hundred bucks goodbye! I don't mind on line stuff, only been burned maybe 8 times in the last 10 years. Heck, your right, it's only $35 and there's some action going on. I should at least get on the wait list even if it costs me. I was looking at Python and it seems enough like everything else 'structured programming' that I think I could pick it up.

BTW: There's a ton of knuckleheads on fleabay selling them for 3x their original purchase price. I hope a bird shits on their heads!!!

I am in my 60s so now I calculate everything based on my chances of dying before it gets here.<grin>

There are 2 companies making them, I believe both are in England. It doesn't cost you anything to get on the waiting list. I finally got my special link to order in May, and that was when I had to pay. I then received a notification from DHL several weeks later that it had been shipped (from England) and it was delivered less than a week after that.

Yes, there was a lot of waiting, but after waiting for a certain Atari-related product a few years ago that I did have to pay upfront for, it was like the blink of an eye... ;)

And the great thing is that the night I first hooked it up, my 15 year old daughter spent over an hour playing with it. She liked that she could do whatever she wanted without worrying about messing something up. So it's serving its purpose. :)

Expected Ship Date: 08/16/2012 Expected Ship Quantity: 1
Final Expected Ship Date: 08/16/2012

They dinged me pretty hard on shipping and tax. $47.78 out the door.
Apparently Newark is a division of Farnell now.

We'll see if their web site that said 141 days or their purchase order is
right. Five weeks wouldn't be so bad.

I saw where someone has already done a SNES port so it has enough horse
power to do anything I would ask of it. I'm maybe 80% sure I know where the
Colleen/Droid 800 code is screwing up. Gawd awful, I am going to have to set
up the tool chain and learn ARM assembler to make sure.

It does look like it could be a must have for an Atari hacker. Just about
everything else costs $100+ to do anything worth while. This should be a
Swiss Army Knife in that it could substitute for everything from being an
emulator to SIO2SD to ATR8000 to XEP80.

No, I checked out their price just now and total cost was about the same.
Purchased mine from Newark/Farnell so I think they will get it to me faster.
It would have been placed on back order for 3 months according to the web
site. I couldn't really start working on it sooner then that anyway. I've
been doing other stuff like building an electic bicycle for my 3 year old
grandson. I should do some more work on it right now.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups
every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Description:
Exclusive TV SCART Cable (RGB+Audio) compatible with Atari ST/STE/STF systems.

It will work flawlessly with the majority of the available TVs, including both CRT o LCD ones, granting the best available video quality out of the above mentioned machines.

Superb quality of picture and great audio sound, this Cable includes internal ehnancements which expand its working range even to the most modern LCD TV Sets.

Compatibility List:
STE, STF, 520STF, STFM, 1040ST & MEGAST

Link: http://snipurl.com/atarist_rgbscart

Cheers,
Oge

5133. The RPi journey begins

Newsgroup: comp.sys.atari.8bit
Date: 2012-08-01 23:32:06 UTC
From: Rick <"ricortes at yahoo dot com">
Message-ID: <wIydndQN3_nhIYTNnZ2dnUVZ_h-dnZ2d@earthlink.com>
Source record: 72

UPS hand delivered my Raspberry Pi today. Saving me the 8 mile drive into town makes it worth the shipping & handling costs. Package included The Raspberry Pi, the P.O., and the SOP 'we don't use lead anymore 3"x4" sheet' that you need a magnifying glass to read. That's IT! Least they could have done is rubber stamp to a link for online line references. Oh well, probably a back handed compliment in they assume if you were smart enough to know about it, you probably already know enough to get started.

Spent 40 minutes to download a tool to create the boot SD card. Frightens me to think of how long it will take to actually down load the linux distribution. I may just head into town with an Android tablet and snag the distribution from a WiFi hotspot. Not to offend any linux users but the RPi web site says an Android port is in the works. I kind of like the Android OS and will probably jump ship as soon as it gets stable. I think I will check out fleaBay and see if someone is selling SD cards preloaded at a reasonable price.

I've got a couple of composite monitors I use with my Atari and satelite tv. I think I may use the RPi as an excuse to pick up a HDMI monitor. I am giving up the ghost on all my CRT VGA monsters. I may keep a few LCD VGA monitors but only the versitle ones with features like DVI, composite, et cetera, inputs.

Wish I was young and still had the energy for this. I started looking at RS232
http://www.logicethos.com/Blog/2012-06-21:_Pi232_Raspberry_Pi_RS232_boards
then did the hand slap applied to the forhead thing: There is no need for it. Should be able to bang out an SIO2PC type hack with only a single $.08 diode. I have to scan the schematics and specs to make sure the I/O is 5V tolerant. These days I think everyone who wanted an SIO2PC or SIO2SD has it already but it does make sense. It would have made more sense 5 years ago but you couldn't predict this was going to come along. The ethernet port and ability to add a USB WiFi dongle give the RPi the ability to be another APE type device.

Rick

Started d/l and got the time estimate of 9 hours. Aborted. It never goes as
fast as it says. Probably would have taken me an hour even at a WiFi hotspot
and I don't know that either of my tablets could stay up that long under the
load. Heck, Android is linux mostly.

Found someone selling preloaded linux distribution on a 8 gig Transend SD
for ~$11 shipped. I made it mine.

They are supposed to be considering VGA connectors. Composite sucks. It
works but output is poorer then most Ataris.

Old USB keyboard I picked up years ago at Halted, USB mouse, cellphone power
supply<lost/stolen my ~$300 cellphone last month, that hurt>, old Samsung
TV/Monitor.

Thing boots quick! Snappy performace. Just about a complete lack of software
available on the SD card. Browser, development package for Python, an editor
or two, 8 or so lame games. I haven't hooked the ethernet port yet but I'll
assume it works just as well. Tried looking up existing apps and games, not
much available.

By snappy I mean about like a 300 mHz Pentium running W95. I am thinking
good'nuff. One of the powers that be is porting SNES emulator, someone else
ported Doom me thinks. Couple of people working on turning it into home
theater or MP3/MP4 player. Really, a good MP3 would make me a happy camper
as with the 8gig SD card it would pretty much hold everything I have. *BUT*
the bad news: The stereo jack is right next to the HD busy LED and you get
buzing and clicks as the OS accesses the SD card! OUCH! I have to check out

the HDMI cable but haven't bought a monitor/TV with HDMI input yet.

> diode. I have to scan the schematics and specs to make sure the I/O is 5V

NOT 5V tolerant! Well, not a huge problem. Just means I have to add a couple of zeners to both output and input and current limiting resistors. The Atari data output is definately 5V and you can never tell when someone pulls up the input. Up way to late and need to sleep on this.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups
every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Archive-name: atari-8-bit/welcome
Posting-Frequency: 20 days
Last-modified: July 25, 2012

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

That website is acutally an ebay listing. I couldn't find a link, email
or phone number there, sorry.

Dennis

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups
every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Archive-name: atari-8-bit/welcome
Posting-Frequency: 20 days
Last-modified: July 25, 2012

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups
every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups
every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Posting-Frequency: 20 days
Last-modified: July 25, 2012

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups
every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Hello

After analyzing the love, I think that we could extend the work to the
foundation of the spirit rapidly;
But you could get some info at http://energy.sourceforge.net;
why did you focus on the love salvation?

Before thinking about the love , you should try:
http://www.bubblews.com/pulses/1263-spirit

UPDATES SINCE PREVIOUS POSTING:
2012.12.04 BITS: #1600 (20121204 - PIXeL PaINT)
2012.12.04 Piotr Fusik: Another Slight Atari Player: ASAP 3.1.3 (2012-12-04)
2012.11.30 FAIL: FAIL 1.4.0 (2012-11-28)
2012.11.20 updated: Atarimax (including MyIDE-II CompactFlash Cartridge)
2012.11.19 Fandal: Deflektor Editor
2012.11.13 Fatih Ayguen, updates by Ray Ataergin: AspeQt 0.8.4
2012.11.02 Jan Johnsen: Rocket Rescue 1.5, Mary Poppins 1.12

------------------------------

Subject: Introduction
```

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry should contain a valid postal address or web page address.

Entries do not include an email address due to the overwhelming amount of spam that would result.

Internation Reply Coupons

The following is from: (2010.09.12)
http://www.upu.int/en/activities/international-reply-coupons/about-irc.html

About International Reply Coupons
When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country; however, if they are from different countries, the enclosed postage stamp will not be valid.

All member countries
This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. As the service began before the days of airmail, the earliest coupons could only be redeemed for a single-rate ordinary postage stamp to a foreign country. In terms of today's UPU Convention, International reply coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign

country.

Mandatory to exchange
The UPU's International Bureau processes several million coupons each year and deals with of all accounting aspects. The International Bureau does not sell IRCs directly to customers; they must buy them from their local post office. Although Posts are not obliged to sell IRCs, it is mandatory for Posts to exchange the coupons. If a Post does not sell IRCs, it is possible to purchase them in a post office located in a neighbouring country.

DISCLAIMER

Appearance in this list does not constitute a recommendation or endorsement of the business, individual, product, or service listed.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

A-4820 Bad Ischl
Austria
http://www.horus.com/~hias/atari/
Developer: AtariSIO V0.30 for Linux (2004-08-31; package contains: a Linux
kernel driver; atariserver - an Atari disk drive emulator similar to SIO2PC or
APE; atarixfer - a small tool to read/write ATR images to an Atari disk drive
connected by a 1050-2-PC or ProSystem cable), Atari Tools for Win32 V0.30-
101002 (dir2atr, adir, and ataricom from AtariSIO package, compiled as a Win32
console application), AtariDsk V1.2 (read, write and format DD 180K Atari
disks on the PC), WriteAtr V0.92b (2003-07-24; write double density ATR-images
to Atari floppy disks on your PC; also create ATR-images of double density
floppy disks), MyPicoDos V4.05 (2010-11-25; small "gamedos" that can read COM,

EXE, BIN and BAS files; supports MYDOS subdirectories and large disks),
MyIDE Tool V0.30 (2007-11-11; direct access to harddrives in MyIDE format on
your Linux/Windows PC), Highspeed SIO patch for XL/XE OS and MyIDE OS V1.30
(2010-11-25; extends the SIO routine of the OS to support: Ultra speed (Happy
1050, Speedy, SIO2PC, ...) up to 126kbit/sec, 1050 Turbo, XF551, and Warp
speed (Happy 810)), 512k SRAM extension for Atari XL/XE V1.3 (2010-12-14),
Turbo Freezer XL/XE 2005

I've been gone for awhile, but I do try to check in from time to time. I
hope all is not lost, next year my 800xl turns 30!

I watch it also. I've got 2 800's in storage, keep telling myself that
someday I'll get one or both set up.

I'm here. Been Apple'ing it up for the better
part of the past 10 years, but I do have a 400
and an 800xl set aside for if and when the time
comes that I want to return to my roots. I have
also a 7800 game system stored away, and yes, it
still works. Thought I had a 2600, too, but I am
at a terrible loss to find the thing. :(

They aren't 8-bits, but I've got a Portfolio and a Hades 060 also. Lots
of software and peripherals for the Hades.

Posting-Frequency: 20 days
Last-modified: December 8, 2012

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups

Good to see you Gozar. What is new over there?

Still tinkering with the Atari 800 (beige) and hoping at one time to get
the incogneto board, which I paid for in May... someday. :P

I'm finally getting around to archiving my old disks, luckily they still
work!

Its a new board that gives the older 800 full XL/XE compatibility.

Check it out on Youtube here:

http://www.youtube.com/watch?v=iavrSCSp43U

and at AtariAge here:

http://www.atariage.com/forums/topic/199490-incognito-board-preoder/

Happy 2013! I would love to see a project like this for 8-bit Atari. How cool would it be to have an 8-bit Atari compatible laptop with wifi and solid state storage (without another OS and emulation)?! I see some are thinking about it or working on it.

Greetings everyone!

Here are the lucky winners for December 2012 at The DarkForce! BBS:

December 2012
1. Klenotic wins a free 12 issue/1 year subscription to
Atariuser Magazine!
2. Gemini8 wins the PeST Serial Mouse Adaptor!

Also, here is the January 2013 prize:

January 2013
1. Atariuser Magazine - some lucky caller will win a free 12 issue
/1 year subscription to Atariuser Magazine.

Congratulations to our winners, and good luck to this months callers!

:)

PS Klenotic and Gemini8, I need your e-mail address!

5241. Atari++ 1.70 released

Newsgroup: comp.sys.atari.8bit
Date: 2013-01-03 13:11:09 UTC
From: Thomas Richter <thor@math.tu-berlin.de>
Message-ID: <kc401bmvf1@news2.informatik.uni-stuttgart.de>
Source record: 180

Hi folks,

a new release of Atari++, the portable atari emulator for Linux and windows has been released on http://www.xl-project.com/ - as usual, you find there the Linux sources and a compiled version for 32-bit Windows. There are so many changes this time that it's hard to start, most of them address defects in the emulation core and not so much in the user interface. There were quite some changes I would love to add, but my vacation is about to end in a couple of days and I was wrapping up to get this release out.

So what's new this time: (long list):

- Priority engine for the "fifth player" generated by missles was redesigned and should now reproduce all possible cases, including the priority conflicts correctly.
- Color mixing of the fifth player on top of GTIA modes C0 and 40 should now work correctly.
- Timing of the GTIA "strange mode" where PF0 to PF3 are used for a HIRES generated playfield was made more precise.
- Color lookup for GTIA modes C0 and 40 on top of non-HIRES ANTIC modes was fixed.
- Player-playfield color mixing for GTIA mode 80 was fixed.
- Experimental support for on-line player and missile resizing was added.
- ANTIC display generation was re-designed yet again and was rewritten.
- ANTIC DLI and NMI timing was made a lot more precise and should now work to the cycle.
- ANTIC VSCROLL support should now work to the cycle.
- ANTIC DMA cycle allocation should now be finally correct for all modes.
- Added emulation for ANTIC forgetting the sync signal if the last line on the screen is HIRES.
- Added emulation of carrying the DLI and VSCROLL information across vertical blanks from the last displayed scan-line.
- The jump on vertical blank ANTIC instruction did not generate a DLI on each line if DLI was enabled. Fixed
- The rather ugly re-generation of ANTIC modelines for character-based modes was removed. This simplified the design, but might impact the emulation quality in some corner cases. A new ANTIC design would be required to fix this. More careful timing in display build-up should make this unnecessary anyhow.
- DMA border computation is now much more canonical and cleaned up.
- Since a lot of the internal timing should now work "on the cycle", there is no longer a need to configure some of the ANTIC variables, thus parts of the ANTIC preferences have been removed.
- CPU emulation includes now parts of the unstable opcode family xB

(opcodes whose lower nibble is B).
- The CPU emulation includes now the emulation of most (if not all) 6502
bugs: Forgetting conflicting NMIs, IRQs and BRKs (!).
Wait-cycle allocation was partially wrong and created conflicts between
memory-refresh cycle allocation and WSYNC requests. This was fixed.
- As a side effect, the special "double WSYNC" check was no longer
necessary and was removed. The emulation is correct anyhow.
- Some CPU preferences were removed because the emulation is considered
to be precise anyhow.
- PIA DDR register reads were not emulated correctly.
- PIA emulation includes now flank-detection on CA2 and CB2 plus
interrupt generation, and thus should be complete.
- POKEY 9 and 17 bit random generators are now emulated precisely, and
the generated "random" numbers should be now identical to those on the
real hardware.
- POKEY two-tone mode should now be emulated correctly, including the
cycle timing for the linked channels.
- Some race conditions for the serial control mode should now be
emulated correctly.
- POKEY direct serial input should now work fine with the SIO emulation,
though direct serial output does not yet work.
- Handling of the POKEY keyboard generation was wrong and should now
work correctly.
- The SIO patch resets now also the audio registers and the IRQ control
of POKEY to work around some software bugs.
- Os++ did not check properly for the RESET bit in the Antic NMI
register and could have triggered false resets under some race conditions.
- The legacy return value for the write-byte bus access was removed as
it was no longer required since a long time.

As always, you can reach me here or better by mail at thor <at> math
<dot> tu-berlin <dot> de.

Greetings and a Happy New Year,

Thomas

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

Hello Michael,

its good to see you are still updating all the A8 lists and texts (A8FAQ, Vendors and Developers list, etc.). Thank you for that !!

I am not sure if you got it - but yesterday I did send you a small e-mail with a few corrections for the A8fAQ. Hopefully you can use the text and thus update the FAQ...

Greetings, Andreas Koch.

Archive-name: atari-8-bit/welcome
Posting-Frequency: 20 days
Last-modified: December 8, 2012

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

5262. 400/800/xl/xe related books

Newsgroup: comp.sys.atari.8bit
Date: 2013-02-02 16:23:20 UTC
From: Barry <phantomm@suddenlink.net>
Message-ID: <510d3d85$0$10399$bbae4d71@news.suddenlink.net>
Source record: 101

Greetings,

I have a rather large assortment of Atari 400/800/XL/XE Books.

Without listing them all now, As I have most in Storage, I wanted to
announce
that I have most if not all of them for sale.
Buy One Book or as many as you like.

You will just have to ask me if I Have the name of the Book or Books.

Some of these are from Compute! Like "The First Compute Book Of Atari
Graphics" I think i have the 2nd and 3rd
editions of that series too. Also, other Books by Compute! And other
Books by other companys. Some go deep into
the design of the 8-bit system. And the Language. Some go over the
different items that were first made for the 400 and 800.

Price of Books depends on condition, Somewhere between $4.00 and $12.00.
with the Sale that I have on them.

Also, I have a nice XEP 80 with original software disk. For possible sale
or trade.

I am looking for a ICD Sparta DOS X cartridge for sale or trade. I have
alot of Atari 8 bit stuff and also Atari 16bit and 32bit
stuff. So if you have one I hope we can work out a trade or deal. I sold
my last one by accident. Still have the original
manual and reference manual. As I have an ICD MIO 1 meg unit I enjoy using
that cart with it.

I also have a ICD P:R Connection, that I would probably trade for the SDX
cart. even though it is the only one I have left.

Looking for something just e-mail and ask.

thanks,
Barry
phantomm@suddenlink.net

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry should contain a valid postal address or web page address.

Entries do not include an email address due to the overwhelming amount of spam that would result.

Internation Reply Coupons

The following is from: (2010.09.12)
http://www.upu.int/en/activities/international-reply-coupons/about-irc.html

About International Reply Coupons
When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons

live in the same country; however, if they are from different countries, the enclosed postage stamp will not be valid.

All member countries
This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. As the service began before the days of airmail, the earliest coupons could only be redeemed for a single-rate ordinary postage stamp to a foreign country. In terms of today's UPU Convention, International reply coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

Mandatory to exchange
The UPU's International Bureau processes several million coupons each year and deals with of all accounting aspects. The International Bureau does not sell IRCs directly to customers; they must buy them from their local post office. Although Posts are not obliged to sell IRCs, it is mandatory for Posts to exchange the coupons. If a Post does not sell IRCs, it is possible to purchase them in a post office located in a neighbouring country.

DISCLAIMER

Appearance in this list does not constitute a recommendation or endorsement of the business, individual, product, or service listed.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Eric Bacher, with James Wilkinson 6/06
http://dis6502.sourceforge.net/ or http://sourceforge.net/projects/dis6502
Developer: Dis6502 2.2 (Interactive 6502 Disassembler for Win32,
designed to specifically support Atari binary files)

Matthew Bacon 11/09
United Kingdom
http://www.myatari.net/
Publisher: MyAtari online magazine (published October 2000 - February 2005)

BAKTRA Software (Michael Kalous) 9/12
Czech republic
http://www.baktra.wz.cz/
Developer: TURGEN SYSTEM 8.3.4 ("Turbo generating system"--conversion of
files to various turbo systems used in former Czechoslovakia and Poland.
Output is an electric signal that can be stored in WAVE files or can be sent
directly to computer's audio system; for JavaRE 1.4.2 or newer), Caverns of
the Lost Miner (game), mmSAP 3.0.0 (SAP player for GNU/Linux), libataricas
0.9.6 (BETA 3; library for atari cassette image manipulation with turbo
support)

Richard Bannister 7/12
Dublin
Ireland
http://www.bannister.org/
Developer: Rainbow v1.5.7 Atari 800 Series Emulator for Mac OS X (port of Rainbow 1.4 by Chris Lam), Emulator Enhancer v2.4.0

Lee Barnes 8/12
http://www.mathyvannisselroy.nl/mydos.htm
http://www.mathyvannisselroy.nl/aspi.htm
Developer: MyDOS RAMdisk patches, Black Box ATASPI V0.42 ("Atari (Advanced) SCSI Programming Interface"), Black Box ATASPI V0.41

Ullrich von Bassewitz (Uz) 2/12
Germany
http://www.cc65.org/
Developer: cc65 2.13.3 - a complete cross development package for 65(C)02 systems, including a macro assembler, a C compiler, linker, librarian and several other tools.

BBK Enterprises (Bryan P. Schappel and Barry Kolbe) 7/05
See: RTS Software

Michael Beck 4/07
Germany
http://www.rho-sigma.de/
Developer: Atari 8bit filesystem for Linux 0.1

Matthias Belitz 6/11
See also: msc
Germany
http://www.mathyvannisselroy.nl/aspi.htm
Developer:
Black Box ATASPI V0.40 ("Atari (Advanced) SCSI Programming Interface"), ATASPI CDPLAY V0.20 (audio CD player), ATASPI MON V0.12 (SCSI monitor)

Brian Berlin 8/09
http://kat5200.jillybunch.com/
Developer: kat5200 0.6.2 -- Atari 5200 and 8-bit computers emulator for PC

Best Electronics (Brad Koda) 6/07
672 Commercial St
San Jose CA 95112-1406
USA
Telephone: (408) 278-1070 (M-F 1:30pm to 5:00pm PST)
FAX: (408) 278-1092
E-FAX: (815) 364-3703
http://www.best-electronics-ca.com/
Vendor: new hardware, commercial software
Developer: "XE" Touch keyboard upgrade for XE computers, Best Light Gun, Best Gold CX40 Joystick PCB, Atari CX40 Joystick Rebuild Kit with Atari Upgraded CX40 Handle and Best Gold CX40 PCB, Atari CX40 Joysticks upgraded with the Best Gold CX40 PCB, Atari Jaguar Power Pad to Other Atari Systems

Adapter Cable, Sega Genesis Controllers To Atari Systems Adapter Cable

B.G. Micro 8/05
555 N 5th St Ste 125
Garland TX 75040-5097
USA
orders: 1-800-276-2206 or 972-205-9447 9am - 5pm CST, Monday - Friday
fax: 972-205-9417
http://www.bgmicro.com/
Vendor: Atari CX85 Numerical Keypad, hard-to-find chips for Atari disk drives (per Russ Gilbert)

Big Five Software (Bill Hogue, Jeff Konyu, Curtis Mikolyski) 8/06
USA
http://www.bigfivesoftware.com/
Developer: Bounty Bob Emulator for Windows NT, 2000, 98, and ME

BITS (SOLO)(Herman Samso J.) 12/12
http://bits.atari.org/ or http://thebitsclub.tripod.com/
Developer: tools & utilities: #1000 (20080312), #1600 (20121204 - PIXeL PaINT). intros & demos: #1502 (20080314), #1503 (20100607), #1504 (20110326), #1505 (20110317), #1506 (20110617), #1507 (20120319), #1508 (20120616)

Grandovec Bostjan 2/12
Pot na Josta 27
4000 Kranj
Slovenia
http://bgrandovec.hostzi.com/
Developer: Pantheon 0.412 (Atari 8-bit computers emulator with collection of 98 games; also emulates Atari 2600, 5200, 7800 with games for each)

Bravo Sierra Computers (BSC) (Ben Smith) 8/12
Oregon
USA
tel: (503) 256-9974 (24 hours)

tel: (714) 639-8189
http://www.gamesplus.com/
Vendor: new/used commercial software, books, small selection of hardware

Cloud-9 (Mark Marlette, Boisy Pitre, Aaron Wolfe) 5/12
3749 County Road 30 SE

Delano MN 55328-8137
USA
http://www.cloud9tech.com/
Developer: Liber809 (Motorola 6809 microprocessor upgrade for the Atari 800XL/1200XL/130XE)

Computer Software Services (CSS) (Bob Puff) 4/07
1350 Buffalo Rd Ste 2
Rochester NY 14624-1829
USA
tel: (585) 429-5639
Fax: (585) 247-7158
http://www.nleaudio.com/css/
Vendor: hard drive systems (include a hard disk, Black Box, power supply, controller, cables, and software), SIO cables, hard disk controllers: Adaptec 4000 SCSI, Adaptec 4070 (RLL) SCSI, Xebec S1410a SASI
Developer: Black Box, Black Box with 64K Printer Buffer, Black Box Printer Cable, Black Box Modem Cable, Floppy board, Super-E Burner, Gang Super-E Burner, Multiplexer, Multiplexer Slave Unit, Quintopus, Quintopus with Switchable Ports, Super Archiver, Super Archiver II, Super Archiver --> SA II Upgrade, XF Single Drive Upgrade, XF Single Drive Upgrade (without Drive Mech), XF Dual Drive Upgrade, XL Dual Drive Upgrade (without Drive Mech), XF551 Enhancer, XF Update, Ultra Speed Plus OS, Hard Drive Pro Backup, Super Pill, Disk Cracker, Black Patch
Shareware developer: SuperUnArc 2.4, SuperArc 2.4, Disk Communicator 3.2, MYDOS 4.50, BobTerm 1.21, MYDOS WHEREIS, MYDOS VTOC FIX
Repair Shop.

Nick Coplin 7/12
Perth, Western Australia
Australia
http://www.64hdd.com/
Developer: 64JPX - JoyPad eXpander - Use your favourite Sega, SNES, NES or PCanalog controller with your Commodore or Atari compatible system

Cosine Systems 4/12
(T.M.R The Magic Roundabout [Jason Kelk], Sack [Adam Hay], Odie [Sean])
United Kingdom
http://www.cosine.org.uk/
Developer: C.G.M. UKScene Radio Intro (30th August 2003), 1K Party (21st March 2004), Reaxion (31st December 2005), Greetz0rz (18th March 2012), Brainpower (24th April 2012)

C.P.U. (Raster, JirkaS, Bob!k, HonzaW) 4/09
See also: Radek Sterba
Czech Republic
http://raster.infos.cz/atari/homepage.htm
Developer: S/XEGS RAMCart 128KB version "G1.04 FIX3+", STEREO upgrade for XL/XE, SDrive - connects to Atari XL/XE's serial (SIO) port and simulates an Atari floppy disk drive with full read/write access to

programs and data stored on a Secure Digital flash memory card (SD),
SDrive Control Program v01 20090403

Preston Crow 2/06
USA
http://www.crowcastle.net/preston/atari/
Developer: binload v2.5 (with Chad Wagner - Atari binary load format file analyzer), atr2unix v1.2 (with Chad Wagner - Extract files from an Atari DOS or MyDOS .ATR file), unix2atr v0.9 (Extract files from a Unix directory tree and create a MyDOS ATR-format disk image file), dcmtoatr v1.4 (written by Chad Wagner), MyDos Binary Menu, SIO2Linux 2.0.1 (with Pavel Machek - a rewrite of SIO2PC software for Linux), DISK 4.0 (sector editor and more)

Device Side Data 4/10
USA
http://www.deviceside.com/
Developer: FC5025 (USB 5.25" floppy controller - as of Feb. 2010 included

software (Linux/Mac/Windows) supports reading Atari DOS 2 disks)

DGS (Dean Garraghty Software) 8/12
United Kingdom
http://www.dgs.clara.co.uk/
Vendor: commercial/PD/freeware/shareware: DGS Atari 8-bit CD-ROM
Commercial & Public Domain Software Collection, containing:
- The Quick programming language V2.2 and V2.1 with 2 support disks
- Screen Aided Management (SAM) v1.25i 80-col desktop system with Budget spreadsheet, Designer DTP package, and Extra Utilities
- 4 PPP Games: Bombi, Rubberball, Glaggs It!, and Minesweeper
- Quick Ed (a character set editor for ST-compatible mouse, joystick, or Atari touch tablet)
- Digi-Studio digitized sounds/music package
- Issues 1-14 of the DGS News-Disk disk-based magazine
- Issues 15-19 of the DGS News-Paper printed magazine (scans of the original mags)
- Issues 20-26 of the DGS News-Paper-on-disk on-disk magazine
- News-Paper Yearly disk (to go with the News-Paper magazine - includes lots of Quick source code)
- Print-Filer from Rambit
- The AMS 1996 video in MPEG-1 format
- The full DGS PD Library (191 mostly double sided disks)
- Bonus Software: MyDOS 4.5, Discomm32, UTIL (PC utility to read/write 180K MyDOS Atari disks)
Also offered via email: Quick Programming Language, Print-Filer from Rambit, Alien Blast, RubberBall, Glaggs It!, Bombi, Minesweeper, PPP Games Pack
File Transfer Service: transfers files between Atari and PC

Dial Group (Zenon, Voy, Jager) 5/05
Poland

Instead of selling the books would you be interested in donating them to Bombjack.org for scanning and archiving as PDF files?

That's a possibility. But there are alot of books, some softcover and some
hardcover. Plus magazines.

Some I don't want to let go as I still use some of them. Like collection of
Compute! Magazine.

Some books go into the 6502 chip and are techie.

I will consider it, maybe there are some I can donate.

Can you pass along where to send them and etc...

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

Last-modified: December 8, 2012

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups
every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

5289. before evaluating the graphics

Newsgroup: comp.sys.atari.8bit
Date: 2013-03-08 10:09:55 UTC
From: betatwelve <betatwelve@voila.fr>
Message-ID: <37637828@news.colorado.edu>
Source record: 128

Greetings.

it should be better to emphasize the fine tuning of the color simultaneously
thanks to the graphics without the color remote surveillance;
But this site gives some ideas http://fr-fr.facebook.com/sylvie.lovric in the
particular case of the graphics;
could you explain how to determine the graphics remote surveillance and the collaboration
with the color facilities management?

Bye Bye

5290. fine tuning ?

Newsgroup: comp.sys.atari.8bit

Source record: 129

Greetings.

it might be appropriate to troubleshoot the remote surveillance of the color
in a rapid manner;
As a matter of fact, you can try also http://www.etsy.com/category/art/painting;
how do you emphasize the graphics recovery and the concept of the color facilities
management?

tchao

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT

5302. high speed sio

Newsgroup: comp.sys.atari.8bit
Date: 2013-03-29 21:45:04 UTC
From: Jack Tseng <tseng4@gmail.com>
Message-ID: <8de90b64-0af3-4aba-8851-5021c5086002@googlegroups.com>
Source record: 141

How is SIO speed increased? I want to increase the speed before loading Drol or MULE ? I have US doubler 1050.

Can we convert the disk MULE or Drol from single density to double? any way?

Jack Tseng

Well having a disk in single density instead of double density would
help it load a bit faster.

Also, loading the disk image over a APE interface or something other
than real SIO floppy drives would be even faster.

Doc Clu

> How is SIO speed increased? I want to increase the speed before loading Drol or MULE ?I have US doubler 1050.

Some devices (probably the US doubler) have non-standard high-speed SIO commands. However, that requires a custom SIO, the one in the Os is not able to communicate with a higher speed. The trouble is that most games require all of the RAM, and will not be able to jump into another custom location to load the data. For the XL models, copying the Os ROM into RAM and patching there might be a solution, though is not easily accomplished.

> Can we convert the disk MULE or Drol from single density to double? any way?

You can certainly convert to ED if you have a version that is not copy protected. For DD, the sector size is different, and hence the bootstrap of the games have to be completely modified. Why do you want to have them in DD? This doesn't buy you much.

Greetings,
Thomas

```

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry should contain a valid postal address or web page address.

Entries do not include an email address due to the overwhelming amount of spam that would result.

Internation Reply Coupons

The following is from: (2010.09.12)
http://www.upu.int/en/activities/international-reply-coupons/about-irc.html

About International Reply Coupons
When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country; however, if they are from different countries, the enclosed postage stamp will not be valid.

All member countries
This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. As the service began before the days of airmail, the earliest coupons could only be redeemed for a single-rate ordinary postage stamp to a foreign country. In terms of today's UPU Convention, International reply

coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

Mandatory to exchange
The UPU's International Bureau processes several million coupons each year and deals with of all accounting aspects. The International Bureau does not sell IRCs directly to customers; they must buy them from their local post office. Although Posts are not obliged to sell IRCs, it is mandatory for Posts to exchange the coupons. If a Post does not sell IRCs, it is possible to purchase them in a post office located in a neighbouring country.

DISCLAIMER

Appearance in this list does not constitute a recommendation or endorsement of the business, individual, product, or service listed.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

5313. Atari XEP 80

Newsgroup: comp.sys.atari.8bit
Date: 2013-04-12 23:59:46 UTC
From: Barry <phantomm@suddenlink.net>
Message-ID: <5168a005$0$10367$bbae4d71@news.suddenlink.net>
Source record: 2

Anyone interested in a Atari XEP 80,
before I put it one E-Bay?

phantomm@suddenlink.net

5314. 8-bit sale

Newsgroup: comp.sys.atari.8bit
Date: 2013-04-13 17:44:53 UTC
From: Barry <phantomm@suddenlink.net>
Message-ID: <51699a09$1$10383$bbae4d71@news.suddenlink.net>
Source record: 3

Thinking of selling some 8-bit stuff...

Thought I would ask here first, if anyone is looking for
any hardware or software?

If so, send me e-mail please.

thanks,

Barry

Archive-name: atari-8-bit/welcome
Posting-Frequency: 20 days
Last-modified: March 11, 2013

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups
every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

5327. Original Atari Cassettes

Newsgroup: comp.sys.atari.8bit
Date: 2013-04-30 20:09:09 UTC
From: Barry <phantomm@suddenlink.net>
Message-ID: <518024ee$0$12765$bbae4d71@news.suddenlink.net>
Source record: 16

Anyone interested in original Atari Cassettes?
Some are games by other companies.
Others are by Atari with their label.
For example Energy Czar, Invitation to Programming.
Some of those comes with manuals.
Would like to get rid of em all at once.

Interested just email before someone else buys them.
there are around 15 to 20 if not more.

phantomm@suddenlink.net

5328. DarkForce! BBS April 2013 winner!

Posting-Frequency: 20 days
Last-modified: March 11, 2013

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups
every 20 days: comp.sys.atari.8bit, comp.answers, news.answers

Don't have a panasonic.

Do have a Atari XDM 121 Daisy Wheel Printer, which is more used to do
a nice letter type set. I still Have my STAR Gemini 10, I just uncovered it
to day and also some black type writer style ribbons. That printer really
cuts down
on Ink cartridge costs. I just bought a new All in one printer not long ago,
and
all ready I've had to replace one Ink Cart. For a few more dollars, I could
have
bought a new Printer with New Carts. CRAZY, I can almost see that moutain
of printers going into a land fill over crazy Ink prices.

Anyway XDM121 is for sale or trade at right price, but not giving it away.
The ribbon cart, can probably still be found. and I think the one I have
still has a few pages left in her.

Rock on!
Barry

Posting-Frequency: 20 days
Last-modified: March 11, 2013

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, remaining intellectual property rights associated with the Atari 8-bit
family of computers are owned by Atari Interactive, Inc., a subsidiary of
Atari, SA of Lyon, France. http://corporate.atari.com/

ABOUT THIS DOCUMENT
Kept by Michael Current, michael@mcurrent.name

By John Bear

According to Kozar Cool Blog, the top five myths about video games are:
Video games lead to violence.

• irls don't play video games (I know at least one who does, a lot).

• You can use the chips from a PlayStation 2 to make the guidance system
on a missile.

• Pong was the first video game.

The number one video game myth: there are millions of Atari cartridges
buried in the desert of New Mexico.

Well, that last one might actually be true.

If you check out the Alamogordo page on Wikipedia, you will see
information on the Trinity Site (even if it happened closer to Socorro),
Ham the Space Chimp and the so-called Atari Graveyard.

Probably Located off First Street near the Charlie T. Lee Memorial Relief
Route, the old landfill now dons old toilets illegally dumped next to the
dried-up blooms from century plants.

Joe Lewandowski who has been in the garbage business for decades said the
urban legend about thousands of copies of E.T., The Extraterrestrial
Atari game buried in an old landfill on the west side of town, is one of
the biggest rumors among gamers.

Lewandowski said some people believe the story.

Others don't.

In fact, I had scarcely finished an online story about a film company
coming to search for the games before he received an email from an author
of a book stating that the myth had already been debunked in a book. (His
book, by the way.)

Lewandowski said many of the people who were involved in the massive
game dump have since died, which does nothing to quell the imaginations
of the more conspiracy-minded people out there.
Some people have said the Daily News reporter who wrote the original
story in 1983 doesn't actually exist. She did and has also since exited
the mortal coil. The plot thickens. Cue sinister music.

Whether you believe the legend is one thing. But everyone pretty much agrees that the E.T. game has one major problem it isn't any good. E.T. keeps falling down a hole, so a player can't really get anywhere except for the beginning, over and over and over ...

Lewandowski said millions of the games were manufactured and almost all of them were returned (except those believed to lie beneath the Friendliest Place on Earth, Alamogordo).

District 1 Commissioner Jason Baldwin earlier this month admitted to having played the game and said that, indeed, it was horrible.

You can shag a copy of the game on eBay for about five bucks. If ironic detachment is your thing, someone also sells T-shirts emblazoned with "Atari 1982" and a pixilated image of the wrinkly little alien from which the game derives its name. A band called Wintergreen even made a music video on the subject.

Lewandowski said Atari already had fallen on hard financial times. The company paid Steven Spielberg tens of millions of dollars to license the E.T. name, and the dud of a game caused its worth to sink even farther.

He said he was present at the landfill in September of 1983 to see the first of nine truckloads of the games that were allegedly dumped by one of his competitors. Laws regarding the discarding of garbage and the running of landfills were much more relaxed in the early 1980s.

Twenty one more truckloads of the games are believed to exist, but where they ended up remains a mystery. Thieves purportedly hijacked one of the truck loads and rode it to Mexico, he said.

Lewandowski said some of games and other Atari-related brick-a-brack were run over with a bulldozer and slathered in concrete, which probably helped to preserve them if they are, in fact, actually there.

Local youth took advantage of lax security at the landfill the night the first games showed up and soon local stores were being inundated with people bringing in crates of the pilfered electronics to sell, he said.

Lewandowski has wanted the story to be told for years and said more than one cable channel has floated the idea, though none has ever come to fruition.

He might get his chance. The city commission on Tuesday agreed to allow Fuel Industries, a company with offices in California and Ontario, Canada, six months to dig up the old landfill where the games are (maybe) buried. Fuel did not respond to a request for comment.

Lewandowski is pretty sure where the games lie, but he ain't sayin' just where. You're just going to have to wait.

---------- Original message ----------
Subject: Atari Party 2013 is 1 month away!
From: Bill Kendrick

Atari Party 2013 is one month away! I hope to see you at the public library here in Davis, on Saturday July 6th! Many of us will be there setting things up at 10am, when the library opens. The event officially starts at 12 noon.

http://www.newbreedsoftware.com/atariparty/2013/location/

If you're coming from out of town, and looking for a hotel or motel, here are a few links that you might find useful:

* Google Maps search for "hotel" near Davis
(note: check-in set for July 6th, the day of the event; change as needed)

http://goo.gl/maps/V4AAI

* "Hotels" pages on the DavisWiki and WoodlandWiki:

http://daviswiki.org/Hotels
http://www.woodlandwiki.org/Hotels

(Sadly, the West Sac. and Dixon Wikis don't have anything on their
"Hotels" pages; but they're wikis, so you can help fix that! ;))

Want to help?

We're still in need of TVs (I need at least 3 more than I have, to set up all of the systems I'd like to bring), and volunteers to help 'usher' (hand out raffle tickets when people arrive, and help attendees -- or at least point them to someone else who can help).

I'm also considering buying a pair of game consoles (Atari 2600 & 7800, plus games & controllers) from a local comic book store to give away as prizes. They're asking $50, but I'll also need to buy some power supplies, since they have none.

However, I have $0 budget this year, since so far all donations have been give-away items. While this obviously isn't a deal-breaker, it's always cool to have actual Ataris to give away as prizes, so I thought I'd mention it, just in case anyone out here felt particularly charitable. :)

Thanks!
